

ExpenseTracker — Personal finance, simplified

[View the live site -> theexpense.lovable.app](#)

Expense Tracker

Track every rupee. Build real wealth.

Project Context

ExpenseTracker is a free personal-finance app for iOS and Android that helps everyday Indians log income and expenses, manage assets and liabilities, and watch their real net worth update in real time. It was built as a self-initiated product to explore how thoughtful UX can turn money tracking from a spreadsheet chore into a ten-second daily habit. Every screen — from the net-worth dashboard to one-tap transaction logging — was designed to feel calm, fast and genuinely useful. The guiding belief was simple: clarity about your money shouldn't require jargon, effort, or a paywall. ExpenseTracker brings income, spending, assets and debt together into one honest, real-time picture.

DURATION

Mar – May 2026 (10 Weeks)

Problem

Managing money in India still means juggling notebooks, screenshots and messy spreadsheets. Most people know roughly what they earn — but not where it goes, what they own, or what they truly owe. That lack of clarity quietly fuels overspending, weak savings habits and a hazy sense of financial progress, leaving people anxious about money they can't actually see.

76%

of Indian adults don't keep a regular record of their day-to-day income and expenses.

~27%

financial-literacy rate among adults in India — among the lowest of major economies.

1 in 2

people can't state their real net worth — assets minus the loans and EMIs they carry.

Indicative figures. Sources: S&P Global FinLit Survey · National Centre for Financial Education (NCFE), India · RBI financial-inclusion reporting.

What was the problem I was trying to solve?

How might we help everyday Indians track their money and understand their real net worth — without spreadsheets, jargon, or a paywall?

Final Solution

One calm, real-time view of your whole financial life — designed and built end-to-end.

Dashboard & Net Worth

The home screen centralises everything into one snapshot. A single hero number shows **net worth** — **assets minus liabilities** — updated in real time, with income, expenses and savings rate right beneath it.

Recent transactions and a **spending-by-category** breakdown sit side by side, so the first thing you see each day is exactly where your money went — no digging required.

Real-time net worth

Category insights

At-a-glance

Add a Transaction in Seconds

The biggest reason people quit tracking is friction. So logging an entry is reduced to three taps: type the **amount**, tap a **category** chip, hit save.

Big rupee input, pre-set categories and smart date defaults mean a coffee or a salary credit takes under five seconds to record — fast enough to become a daily habit.

3-tap logging

Smart defaults

Under 5 seconds

What You Own vs. What You Owe

Most apps stop at expenses. ExpenseTracker completes the picture: **assets** — savings, investments, property — sit beside **liabilities** like home loans, car EMIs and card dues.

The two columns resolve into a single honest number — your **real net worth** — so progress becomes something you can actually watch grow, month after month.

Outcome & Reflection

A live, shippable product — designed and built end-to-end — that turns financial tracking from a chore into a ten-second daily habit, with real net worth front and centre.
