themind

Validate your business idea — and find your competitors — in minutes.

Project Context

themind is an AI tool that turns a one-line business idea into a full validation report in minutes — scoring its potential, sizing the market, and surfacing the competitors a founder will be up against. It was built for an early-stage client who needed to test ideas quickly before committing scarce time and money. The design challenge was to make AI analysis feel trustworthy, not magical: fast enough to use on a whim, yet rigorous enough that founders would act on the results. Every screen distills heavy research into a clear, confident answer — and a recommended next move.

Problem

themind's founder kept hitting the same wall: plenty of ideas, but no fast way to know which were worth building. Validating one meant weeks of manual market research, scattered competitor Googling, and gut-feel calls — slow, expensive, and easy to get wrong. For a small team on limited runway, every week chasing a weak idea was runway they couldn't get back, and a wrong bet could sink the company. **They needed to pressure-test an idea and map the competition in minutes, not weeks — with enough rigour to actually trust the answer.**

35%

of startups fail because there's simply **no market need** — the single biggest reason.

~3 wks

typical time founders spend on manual idea and competitor research before a decision.

7 in 10

early founders rely mostly on gut feel rather than structured validation.

Indicative figures. Sources: CB Insights "Top Reasons Startups Fail" · founder-research interviews. Replace with your study's data.

Approach

I reframed validation as a single, fast conversation rather than a research project — then designed every output to earn the founder's trust. The methodology: understand how founders actually judge ideas, then compress that judgement into one input and one confident, explainable report.

1

One idea in, one report out

Cut the entire flow to a single text box. No forms, no setup — describe the idea, get a structured verdict in minutes.

Key decision: remove every step that wasn't the idea itself.

2

Design for trust, not magic

Show the reasoning behind the score — market size, demand, insights — so the number feels earned instead of arbitrary.

Key decision: transparency over a black-box score.

3

End with a clear next move

Turn competitor analysis into an explicit opportunity gap and a prioritised action plan, so users leave knowing what to do.

Key decision: always answer "so what now?"

What was the problem I was trying to solve?

How might we let a founder validate an idea and understand the competition in minutes — with enough rigour that they'll actually trust and act on the result?

Final Solution

An idea goes in; a confident, explainable verdict comes out — backed by market data, competitors, and a plan.

Idea Validation

A single **Viability Score** anchors the report, with market size, demand and competition level broken out beside it — so the verdict is instantly readable and clearly justified.

Key insights and a target-audience profile turn the raw analysis into something a founder can act on, not just admire.

Viability score Market sizing Explainable AI

Competitor Discovery

themind surfaces the real players in the space as scannable cards — each with positioning, traction and tags — so the landscape is clear at a glance.

Crucially, it ends on an **opportunity gap**: the wedge no competitor is filling, framed as the founder's way in.

Auto-discovery Positioning tags Opportunity gap

Recommended Next Moves

Every analysis closes with a **prioritised action plan** — concrete, ranked moves that translate the verdict into a go-to-market direction.

A final overall verdict ("Validated — build the MVP") gives founders the confidence to commit, or the clarity to walk away.

Action plan Clear verdict Exportable report

Results

The work collapsed weeks of research into minutes — and made the output something founders trust.

<3 min

from a one-line idea to a full validation report

10×

faster idea-to-insight versus manual research

85%

of test users found a competitor they hadn't known about

4.8/5

average usefulness rating from early testers

Representative early-stage results — replace with your project's verified metrics.

themind

themind turned three weeks of messy research into a single afternoon. We killed two weak ideas early and doubled down on the one the data backed — it probably saved us a full quarter of runway.

Early-stage startup · client

Tools & Timeline

Eight weeks from first conversation to a live MVP — designed and built end-to-end.

Week 1

Discovery

Founder interviews, problem framing, success metrics.

Weeks 2–3

Design

Flows, wireframes, brand and high-fidelity UI in Figma.

Weeks 4–7

Build

Front-end build, AI integration, iterative testing.

Week 8

Launch

Polish, QA and live MVP release.

Tools & technologies

Figma React TypeScript Tailwind CSS Lovable LLM / AI APIs Supabase

Scope

Product strategy · UX flows & wireframes
Visual design · brand, UI system, dark + light
Front-end build · responsive app & AI integration

Outcome & Reflection

A live, shippable AI product that compresses weeks of idea validation into minutes — and, just as importantly, presents its findings in a way founders actually trust and act on.

WHAT I'D EXPLORE NEXT

Saved idea history and side-by-side comparison, deeper competitor financials, and a "confidence range" on each score — so founders can weigh not just the verdict, but how sure the model is.
